

MOBILE TEST CASES - Functional & UX Testing (iOS)

Test Case ID: MOB-001

Title: Flight Search Functionality - iPhone 12

Device: iPhone 12 (iOS 16.5)

Preconditions: App installed and logged in

Steps:

1. Tap 'Search Flights'
2. Enter departure city 'NYC'
3. Enter destination 'LAX'
4. Select date (30 days out)
5. Tap 'Search'

Expected Result:

Search results display within 3 seconds, showing at least 5 flight options with price and duration

Execution Details:

Result: PASS - Results display in 2.5 seconds

Test Case ID: MOB-002

Title: Responsive Layout - iPhone SE (Small Screen)

Device: iPhone SE (375px width)

Preconditions: App installed

Steps:

1. Open app
2. Navigate to flight results
3. Verify layout on small screen
4. Scroll through results

Expected Result:

All content visible, no overlapping elements, text readable, buttons accessible with thumb

Execution Details:

Result: FAIL - Search bar overlaps with results on first scroll

Test Case ID: MOB-003

Title: Localization - Spanish Language

Device: iPad Air (iOS)

Preconditions: Device language set to Spanish

Steps:

1. Set device language to Spanish
2. Launch app
3. Check all UI elements
4. Test flight booking flow

Expected Result:

All labels, buttons, and messages display in Spanish correctly

Execution Details:

Result: FAIL - Date picker still shows English months

Test Case ID: MOB-004

Title: Touch Interaction - Booking Confirmation Button

Device: iPhone 12, iPad

Preconditions: In checkout flow, review screen

Steps:

1. Navigate to booking review
 2. Tap 'Confirm Booking' button
 3. Hold finger on button (2+ seconds)
 4. Swipe across button
-

Expected Result:

Button responds to tap, shows visual feedback, completes action on release

Execution Details:

Result: PASS - Button responsive, visual feedback clear
